

Question 25

- Cloud computing is the delivery of on-demand computing services over the internet over a pay as you go basis.

Examples of Cloud Service Models

a) IaaS (Infrastructure as a Service)

- provides foundational, virtualized IT infrastructure (servers, networks and storage). It offers the highest level of flexibility and management control over IT resources
- For example Amazon Web Services (AWS)

b) Platform as a Service

- Delivers a framework and environment for developers to build, test and deploy software applications without worrying about managing the underlying infrastructure
- Example Google Cloud App Engine

c) Software as a Service

- Delivers fully developed ready to use software applications over the internet on a subscription basis. The maintenance updates and infrastructure is managed by the provider
- Example Microsoft 365
